

Additional Requirement – Project Proposal Presentation

Week 14 – Project Proposal Presentation

Before the final oral presentation in Week 16, each group must prepare and present a:

Project Proposal Presentation

The proposal presentation will be conducted in:

Week 14

This proposal presentation is intended for preliminary review of your project direction, feasibility, dataset, and planned machine learning methods.

Please make sure your topic is clear, feasible, and follows the course requirements.

Proposal Presentation Requirements

Each group must prepare:

PowerPoint Slides (PPT)

and give a short oral presentation introducing the proposed project.

Presentation Time

Each group:

3–5 minutes

Proposal Presentation Content

The proposal presentation should include the following sections:

1. Group Member Names

Please clearly list all group members.

Example:

- **Student A**
- **Student B**

- **Student C**
 - **Student D**
-

2. Project Title

Please provide a clear and specific project title.

Examples:

- **House Price Prediction Using Random Forest**
 - **Student Performance Classification with Decision Tree**
 - **Diabetes Prediction Using Multiple Machine Learning Models**
-

3. Project Motivation

Please explain:

- **Why did you choose this topic?**
 - **Why is this problem important?**
 - **What practical value does it have?**
-

4. Proposed Methods

Please describe the machine learning methods you plan to use.

Examples:

- **Decision Tree (J48)**
- **Random Forest**
- **Logistic Regression**
- **KNN (IBk)**
- **Naive Bayes**
- **SVM**
- **LogitBoost**

You should also briefly explain:

- **Why you selected these methods**
- **Which models you plan to compare**

(At least 3 models are recommended)

5. Dataset Source

Please explain:

- **Where the dataset comes from**
- **Whether the data is self-collected or downloaded**
- **Expected number of instances and attributes**

Examples:

- **Kaggle dataset**
 - **WEKA built-in dataset**
 - **Self-collected images**
 - **Web scraping data**
-

6. Expected Results

Please describe what you expect to achieve.

Examples:

- **Improve classification accuracy**
 - **Compare which model performs best**
 - **Build a prediction system**
 - **Create visualization results**
 - **Discover important features**
-

Submission Requirements

Each group should submit:

1. Proposal PPT Slides

Format:

- **PDF or PPT**
-

2. Oral Presentation

Each group must briefly introduce their proposed project in class.

3. Uploading the Presentation File

At least one group member must upload the presentation slides before the presentation session.

This is required to ensure that the presentation files are ready and available for the in-class presentation.

Please upload the file in advance to avoid delays during the presentation session.

Important Notes

Proposal presentation is required

Groups that do not complete the proposal presentation in Week 14 may lose project evaluation points.

Please start early and avoid waiting until the last minute.
